

CASE STUDY

PARKING GARAGE LINE STRIPING

OBJECTIVE

- Remove hundreds of parking lot stripes from this multiple floor parking garage.

CHALLENGE

- Other floors of the garage were in active use. Client needed an unobtrusive removal solution.

PROJECT OVERVIEW

Accurate Pavement Striping has over 20 years of collective experience in asphalt striping and lot development. A major aspect of their business involves removing old lot striping, and when they were asked to remove thousands of feet of paint in an active garage, they knew they needed to level up their toolkit.

DUSTLESS BLASTING® was the ideal solution, offering fast removal, mobility, and dust suppression. They calculated their removal rate to **18 feet of striping per minute**, an improvement from their previous dry

blasting system. They also found that this new system was **only requiring half the media** that a dry blaster would need to do the same work.

PRODUCTIVITY

MEDIA USAGE:

200 lbs/hr

ABRASIVE MEDIA:

40/70 Crushed Glass

REMOVAL RATE:

18 ft/min

BLAST PRESSURE:

80 psi

EQUIPMENT:

DB500® MOBILE XL

CLEANUP METHOD:

Hired a street sweeper
